Cabling Services

Building trusted connections.

WE HELP BUILD PHYSICAL LINKS BETWEEN NETWORKS

Hundreds of customers trust Sunwire to design and install their cabling to meet their high-performance network requirements.
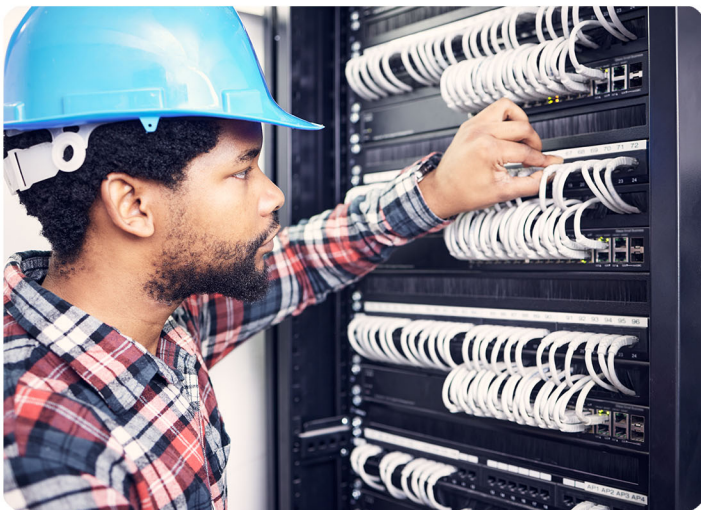

Structured Cabling

A trusted partner leads to a stable network.

A cable network designed and installed by an expert technician safeguards your business against various data network problems. We follow stringent industry standards and provide you with detailed network information.

A well designed network has the flexibility and modularity to take advantage of new technologies at a minimum cost and without disruption to office productivity.

Emergency Repairs

Tools and expertise when you need them most.

Approximately 90% of computer network failures are attributed to poor cabling. This results in excessive downtime and loss of valuable data. Today's bandwidth intensive applications demand a robust network. Our technicians can test damaged or cut cables and repair them.
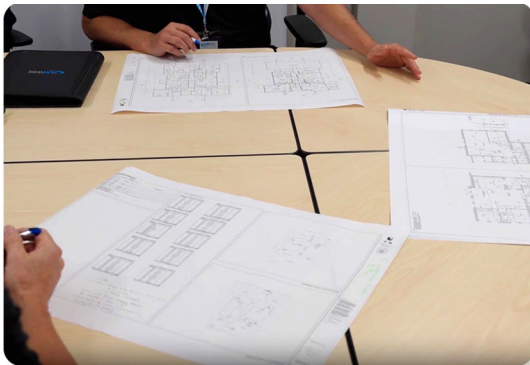

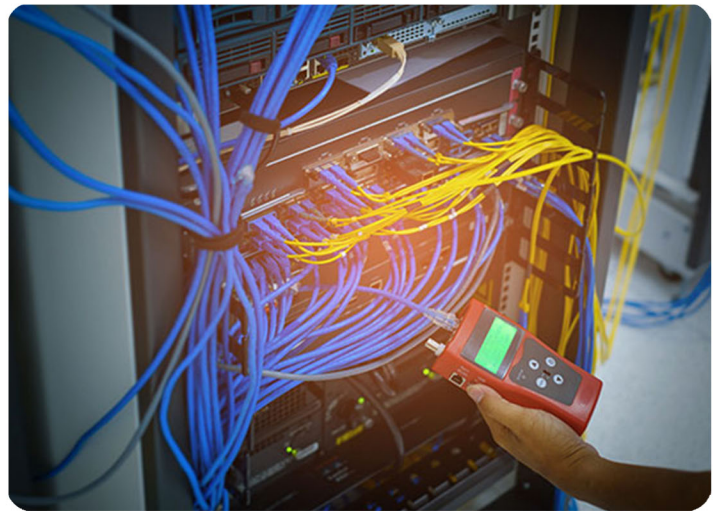

Fibre Optic Splicing

No job is complete until properly tested.

Fiber optics have become an integral part of network infrastructures. Fiber cabling can be utilized for different purposes, distances and installed in a variety of environments. Our team of experts have the skills and tools required to install and test any-sized project.

Cabling Solutions

We install and test any form of telecommunication infrastructure.

-Cat5e / Cat6 / Cat6A / Cat7 / Cat8
-Fibre Optics
-Splicing
-Testing and Certification
-Network Racks / Management
-Infrastructure and Data Centre Design

INFRASTRUCTURE & DATA CENTRE DESIGN

Our tailored solutions ensure your business' IT environment is efficient, scalable, and secure. From layout planning to implementation, we provide the foundation for high-performance operations, keeping your systems connected and ready for growth.
